John G. and Susan H. DuPuis, Jr. Wildlife and Environmental Area

Bird Checklist

Welcome to the John G. and Susan H. DuPuis, Jr. Wildlife and Environmental Area. The property contains 21,875 acres of pine flatwoods, wet prairies, hammocks, marsh and cypress domes. It was purchased by the South Florida Water Management District (SFWMD) in 1986 through the Save Our Rivers program. Stewardship of the property is currently a cooperative effort between the SFWMD and the Florida Fish and Wildlife Conservation Commission (FWC). Prior to SFWMD acquisition, the property was operated as a cattle and sheep ranch by the late John G. DuPuis, Jr., of Miami.

The area is home to numerous species of wildlife, including deer turkey, quail, squirrel, fox, coyote, feral pig and bobcat. A variety of waterfowl and wading birds use the property’s abundant wetlands. These species are most plentiful when water levels are receding and food sources become more concentrated. Bald eagles, owls and hawks are frequently sighted throughout the property. Woodpeckers and songbirds are common in upland areas.

DuPuis offers many recreational opportunities for the outdoor enthusiast, including more than 35 miles of the Florida Trail composed of four loops ranging from 5 miles to 15.6 miles. The trail includes a connector trail to the J.W. Corbett Wildlife Management Area. Hiking trails cross a variety of terrains from wetlands to hammocks. Overnight camping is available at the equestrian campground, backcountry campsites on the hiking trails and the general-use family campground. A group camp-site is available by reservation only. Public use activities include hiking, fishing, hunting, horseback riding, bicycling, camping and nature study. For general information regarding all activities please call, 561-924-5310 or visit the SFWMD web site at www.sfwmd.gov.
